Dersin Amacı:	<p>This course is designed to help students understand the nature and determinants of international good and factor movements and the economic impact of international trade patterns and trade policy around the world. We will develop theories of international trade in order to explain the factors that affect international flow of trade and to analyze the question whether free trade improves welfare. The implications of various possible restrictions on international trade (import tariffs, quotas, voluntary export restraints, etc.) will be discussed. The incentives for countries and international organizations to free or restrict trade will be analyzed drawing welfare consequences. At the end of the semester, students will be able to evaluate domestic and international economic consequences of trade policies, custom unions and trade agreements.</p>
